

Traceability System

This is a system that keeps records on the server, of the history of production, inspections and delivery of products manufactured in a plant.
In recent years, businesses have been questioned about their quality and safety. Traceability system can make an improvement in quality and safety, and is a detailed oriented, rapid means of finding the cause of defects or accidents.

Benefits of installing traceability system

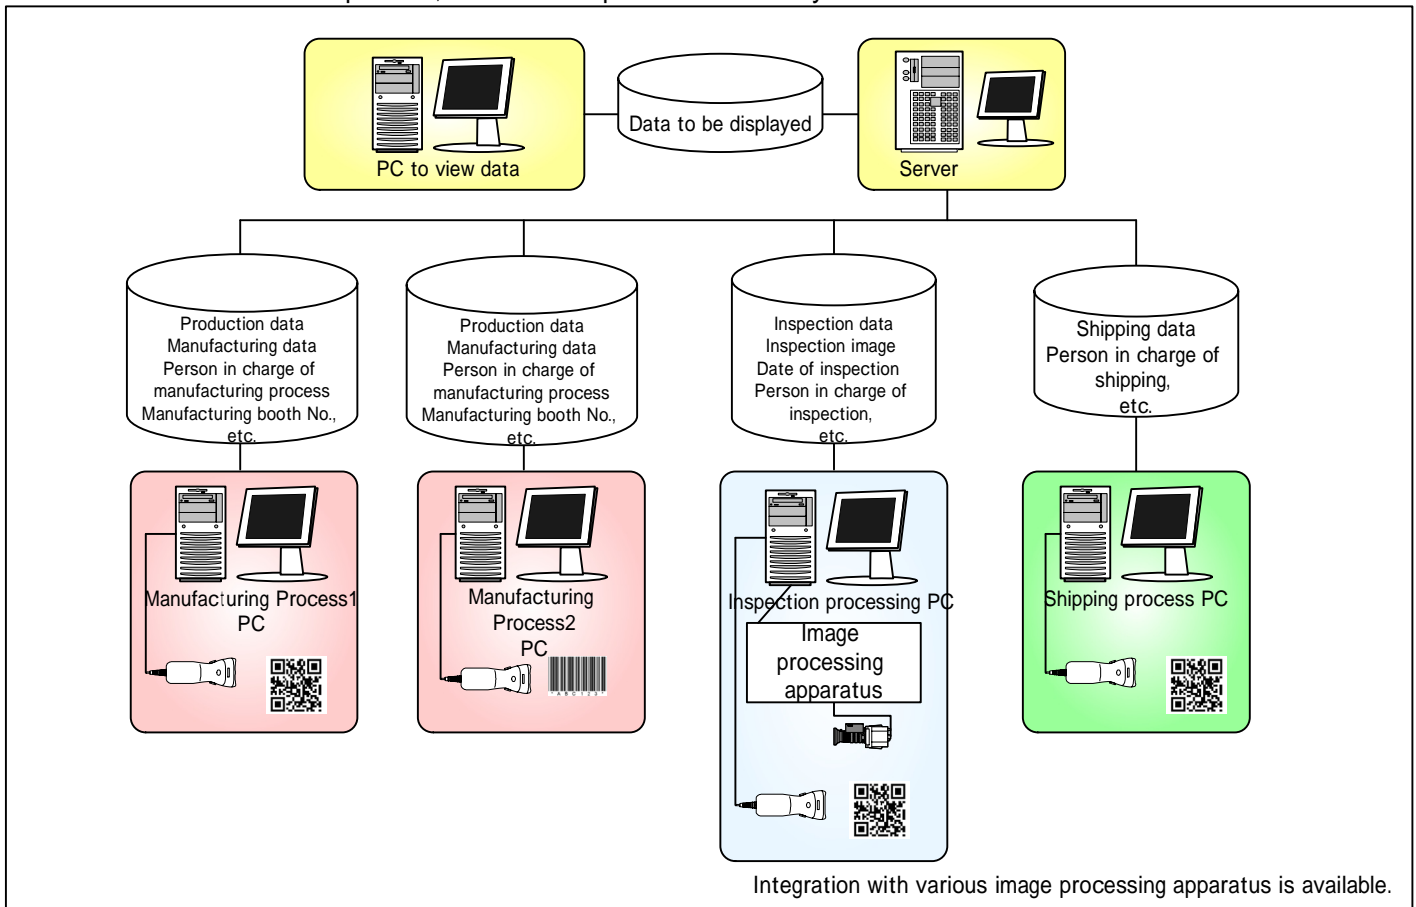

- It can make production easy to comply with the Product Liability Act (product data record and its review).
- It can lead to quality improvement because of its analysis function for manufacturing processes and inspection data.
- Means to achieve early detection and recall of defective products.
- A means of finding the cause more rapidly and extensively in the event of defective products after shipment.

<System structure example>

This is a system installed in an automotive related plant.

Manufacture - Various types of data, collected up to the point of shipping, are stored on the server. Such data can be viewed on the PC as necessary.

Inspection is performed using the image processing apparatus during the inspection process, and image data, which is the result of the inspection, is stored as part of the history.

Contributing to the system of the future...
